Šifra: 14288

Kategorija proizvoda: Setovi mikrofona

Proizvođač: SONTRONICS

Cena: **664,00** EUR

Sontronics DM-series microphones were designed and developed over three years by founder Trevor Coley alongside top UK producers and drummers. Each microphone has been specifically tailored to capture the perfect sound from each of your drums and the mics have received rave reviews, awards and have appeared on the touring kits and studio set-ups of major drummers including Dave Grohl, Aerosmith's Joey Kramer, Muse's Dom Howard and Blur's Dave Rowntree.

Sontronics DM-1B

The DM-1B large-diaphragm, end-fire cardioid condenser microphone is superb at capturing the entire dynamic range of your kick drum, thanks to its high sensitivity, extremely low self-noise, -15dB attenuation pad and ability to handle up to 155dB SPL. The DM-1B delivers outstanding results on kick drum but also sounds fantastic on bass guitar cabinets, low brass and woodwind, tenor and baritone sax and even male vocals.

Sontronics DM-1S & DM-1T

The DM-1S for snare and DM-1T for tom tom are small-diaphragm cardioid condenser mics each with a -10dB pad and SPL handling of up to 135dB. They have been designed with subtle variations in their response to suit the exact sound of your snare and tom, catching every element of your sound from the crack of the first hit to the rattle and snap of the snare and the boom and resonance of your tom tom. Together with the DM-1B, they combine to deliver exceptional results on your drumkit, whether recording in the studio or performing in a live environment.
